the best small loudspeakers

The Sampan FTL

a new benchmark for small speakers

The Sampan FTL images better on a bookshelf than most small loudspeakers image on stands out in the room. Place it on stands out in the room and there is no contest. And while most small speakers struggle to reproduce 70 cycle bass, the Sampan FTL is engineered to play 40 cycle bass with ease. In fact, the Sampan FTL bass extension will put many full range loudspeakers to shame. And from top to bottom the Sampan FTL presents a very neutral and seamless frequency response with no excesses at any place in its frequency spectrum. It produces a totally engaging and enveloping sonic experience. It's astonishing resolution and foot tapping speed will make you want to go through your entire music collection to discover and savor sonics delights you missed before. All this from a loudspeaker that is 8 inches tall, 4 inches wide, and 9.5 inches deep and weighs a scant four pounds. The Sampan FTL uses the latest transducer technology – a cast aluminum frame, neodymium magnet, underhung motor design to generate surprising sound pressure level. Its crossover-less design and flat impedance curve means it can easily be driven with everything from an iPod to the most exotic amplifier. And its small size means you are free to enjoy high quality music just about anywhere. The Sampan FTL will make you rethink the possibilities of small loudspeaker performance.
